

Palm Leaf Plates

These biodegradable bowls & plates are made from leaf sheaths that are naturally shed from the Areca Palm. The palm sheaths are pressure washed, the clean fibre is then sterilized at 180°C through a pre-heated moulding process where the product acquires its shape. This process uses no chemicals, resins, dyes or synthetic materials. No trees are cut down.

100% biodegradable & compostable, lightweight, strong, odourless, leakproof, heat & water resistant, these plates are completely hygienic & suitable for all hot and cold food. Suitable for freezer, fridge, microwave & oven to 220°C.
